SUMMARY

Having spent the past two years building a data science function from scratch at a successful sustainability start-up, I am now looking for a new challenge where I can continue to apply my skills building state-of-the-art machine learning solutions with a group of like-minded colleagues. Outside of work I enjoy playing my piano, gaming and whatever niche hobby I have at the time.

TECH STACK

AWS, GCP, Azure, Python, SQL, pandas, NumPy, scikit-learn, Hugging Face, PyTorch, Bash, Sagemaker, VertexAI, MLflow, Weights and Biases, Terraform, Github Actions

EDUCATION

University of Edinburgh

BSc Theoretical Physics

June 2017

2:1 (69%)

EMPLOYMENT

Altruistiq | Sustainability

Senior Lead Data Scientist

May 2022 – Present

- Semi-automated PDF data extraction using a pipeline of models for clustering, grouping, multi-label multi-class classification and text extraction, with human-in-the-loop to safely deal with any corrections. The full process had a baseline KPI of ~50% accuracy and removed the need for technical engineers, saving the business ~£172,000/year.
- Coded all models, MLOps, DevOps, infrastructure and internal tooling for my team. This includes our MLOps architecture for model versioning, model release, data versioning, data pipelining, and model monitoring.
- Developed and deployed a ChatGPT-based Streamlit app to enable analysts to navigate complex PDFs in multiple languages using a privately hosted Llama-2-13b model.

Lead Data Scientist

- Worked with product managers to break down complex data science and ML project requirements into a clear backlog that could be managed in sprint cycles by non-technical managers and be prioritised against other ongoing company projects.
- Developed and deployed a vector-based retrieval algorithm using BERT embeddings for automating the tagging of customer data.

Lloyds Banking Group | Financial Services

Data Scientist

Sep 2018 – May 2022

- Developed a novelty detection algorithm using the CluStream framework as part of the bank's insider criminal threat detection project.
- Authored and supported a Data Science Masters project at the University of Edinburgh, focusing on utilising Bayesian Neural Networks for anomaly detection.

Cognitive Data Science Manager

- Developed and embedded a topic modelling tool using unsupervised LDA topic models for identifying emerging themes in customer vulnerability documents, resulting in the successful identification of OOS climate change risks.
- Developed a vector-based retrieval search engine as a replacement for an FAQ Risk chatbot, avoiding around 300k in costs.

BP | Oil & Gas

Supply and Trading Market Intelligence Analyst (Graduate)

Sep 2017 – Jun 2018
